

RoHS DECLARATION OF CONFORMITY

Hereby, taking into account the restrictions resulting from the "Directive 2011/65/EU (the RoHS Directive) OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL of 8 June 2011 on the restriction of the use of certain hazardous substances in electrical and electronic equipment" superseding "Directive 2002/95/EC (the RoHS Directive) OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL of 27 January 2003, Directive 2015/863 (RoHS 3) and Directive 2017/2102/EU, Elhurt EMS Sp. z o. o. declares, that - based on the information provided by our supply lines and our certain knowledge pertaining to our own processes - products supplied by Elhurt EMS Sp. z o. o. are RoHS compliant from the moment the respected directives came into force.

The confirmation of compliance status by our supply lines is granted for products which do not contain any of the restricted substances referred to in Annex VI in the RoHS Directive 2011/65/EU & Directive 2015/863 with a higher than maximum concentration values tolerated by weight in homogeneous materials:

Lead 0,1%,
Mercury 0,1%,
Cadmium 0,01%,
Hexavalent chromium 0,1%,
Polybrominated biphenyls (PBB) 0,1%,
Polybrominated diphenyl ethers (PBDE) 0,1%,
Bis(2-Ethylhexyl) phthalate (DEHP) 0,1%,
Benzyl butyl phthalate (BBP) 0,1%,
Dibutyl phthalate (DBP) 0,1%,
Diisobutyl phthalate (DIBP) 0,1%.

Elhurt EMS has taken all reasonable steps to verify the supply line information regarding the absence of the restricted substances in ELHURT EMS processes. During the components purchase process, we request that the parts need to fulfill ROHS directive compliance. If this requirement is not met by the supplier, he has to inform us about the issue. Also solder paste, alloys, glue, screws, mechanical parts, etc. are seen as components.

Being a subcontractor also requires us to follow the product owner's (customer) Bill of Material (BOM) strictly. It starts with product specification, which is imported to our ERP and is based on the listed manufacturer's P/N's. There might be electric, electronic, and mechanical components. Components fulfilling "the RoHS Directive" obligations should be defined during the R&D phase of product development by our valuable customers directly or by their subcontractors responsible for this field. All mentioned components are locked in the final product documentation.

Part of our sourcing policy defines the incoming inspection process. During that process, each delivered component is verified if it is compliant with the component P/N that was requested in the order. This routine allows us to commit that we only use components specified in customer documentation (BOM). Therefore end product fulfill "the RoHS Directive" requirement when the customer's initial documentation indicates components that fulfills mentioned obligation.
